EDUCATION

McMaster University

Bachelor of Computer Science and Mathematics

Hamilton, ON

Sept 2021 – Dec 2025

EXPERIENCE

Full Stack UI Developer

Jan 2025 – Dec 2025

McMaster

Hamilton, ON

- Led a full UI and front-end architecture overhaul using **TypeScript**, **Angular-style component patterns**, React, Tailwind CSS, and GSAP to modernize UX, improve accessibility, and enhance performance
- Implemented modular, reusable UI components and feature modules, following **Micro Frontend (MFE)**-inspired patterns to enable independent deployment and scaling of key sections of the site
- Integrated the front end with backend services via **RESTful APIs**, leveraging typed data contracts and reactive data flows for robust, maintainable client-server interactions
- Improved page load performance by **25%** (Lighthouse, Web Vitals) by optimizing data fetching, enabling server-side rendering, and reducing client bundle size in a TypeScript SPA
- Designed and implemented backend logic using **Node.js** and **Firebase** to enable administrators to securely manage news and site content, with role-based access and environment-based restrictions
- Collaborated in an **Agile** environment with designers and product stakeholders, participating in code reviews, sprint planning, and regular demos to ensure high-quality UI delivery

Front-end Developer

Oct 2024 – Jan 2025

R2R

Barrie, ON

- Engineered a production-grade **TypeScript** single-page application using React, Tailwind CSS, and component libraries to deliver a responsive, mobile-first UI for **200+** active users
- Collaborated with backend developers to integrate **RESTful APIs**, handling asynchronous data flows and error states with reactive patterns and centralized state management concepts
- Implemented responsive design principles and layout systems similar to **Angular Material** and **Bootstrap** grids to ensure consistent UX across desktop and mobile
- Optimized client-side performance through component-level refactoring, code splitting, asset optimization, and state management improvements to maintain smooth user experience under peak traffic
- Implemented secure data handling practices including hashed user credentials and protected payment workflows for a payment gateway managing over **\$50,000** in user transactions

Full Stack Developer

Apr 2024 – Aug 2024

The Win Column

Toronto, ON

- Developed and maintained a full stack educational platform with a strong focus on **front-end UX**, building modular, testable UI components and pages backed by **RESTful APIs**
- Built backend services using **Python**, **Node.js**, and MongoDB Atlas to support course management and user workflows, integrating them into the front end via typed HTTP clients
- Improved API performance and reliability through query optimization and database indexing, resulting in faster and more consistent response times visible in the UI
- Increased user registrations by **20%**, as measured by signup records, by streamlining the registration flow and reducing form friction with responsive, user-friendly UI patterns

TECHNICAL SKILLS

Languages & Core Technologies: TypeScript, JavaScript (ES6+), Python, Java, C, C++, Haskell, PHP, SQL (Postgres, MySQL), HTML5, CSS3, SCSS, JSON

Front-end & UI: React, Next.js, Component-based Architecture, Responsive Design, Tailwind CSS, Bootstrap, Framer Motion, GSAP, WebGL, Recharts

Backend & APIs: Node.js, Express, RESTful APIs, Firebase (Auth, Firestore), MongoDB, MongoDB Atlas

Practices & Tools: Git, Agile development, CI/CD concepts, Unit testing (Jest), Asynchronous programming, State management patterns, Cloud familiarity (AWS)
