EDUCATION

McMaster University

Hamilton, ON

Bachelor of Computer Science and Mathematics

Sept 2021 – Dec 2025

Relevant Courses: Software Design and Architectures, Programming for Performance, Data Structures and Algorithms

EXPERIENCE

Full Stack Developer

Jan 2025 – Dec 2025

McMaster

Hamilton, ON

- Led a full website overhaul using **React**, Tailwind CSS, and GSAP to modernize UI, improve usability, and enhance performance
- Improved page load performance by **25%** (Lighthouse, Web Vitals) by optimizing database queries, enabling server-side rendering, and reducing client bundle size in a React-based application
- Designed and implemented backend logic using **Node.js** and **Firebase** to enable administrators to securely manage news and site content
- Secured admin access by implementing environment-based domain restrictions and Firebase authentication
- Validated performance under high-traffic conditions by load testing during peak events with over **1,000** concurrent users

Front-end Developer

Oct 2024 – Jan 2025

R2R

Barrie, ON

- Engineered a production-grade **React** application using Tailwind CSS, delivering a responsive and accessible user interface for **200+** active users
- Integrated frontend workflows with backend APIs to support secure user registration and data handling at scale
- Optimized client-side performance through component refactoring, asset optimization, and efficient state management to ensure fast load times under peak traffic
- Implemented secure data handling practices including hashed user credentials and protected payment workflows for a payment gateway managing over **\$50,000** in user transactions

Full Stack Developer

Apr 2024 – Aug 2024

The Win Column

Toronto, ON

- Contributed to the development of a full stack educational platform by building backend services using **Python**, **Node.js**, and MongoDB Atlas to support course management and user workflows
- Designed and maintained **RESTful APIs** to support frontend integration, emphasizing clear endpoint structure and maintainable data contracts
- Improved API performance and reliability through query optimization and database indexing, resulting in faster and more consistent response times
- Increased user registrations by **20%**, as measured by signup records, by streamlining the registration flow and reducing form friction

PROJECTS

Arabic Learning Platform | *React, Node.js, MongoDB, Tailwind CSS*

Oct 2025 – Present

- Developed an interactive e-learning platform featuring lessons, quizzes, and progress tracking for **100+** students
- Implemented backend logic for user data persistence, lesson progress, quiz timers, retakes, and grading, as well as admin dashboard for course creation and management.

Williams Cafe Daily Task Checklist | *React, Node.js, MongoDB, Cloudinary*

Sept 2025 – Dec 2025

- Designed and developed a full stack task creation, tracking, and archiving system to improve operational consistency for a Williams Cafe branch
- Improved task completion efficiency to **99%**, as measured by archived completion data, by building a user-friendly tracking system using Node.js and MongoDB

TECHNICAL SKILLS

Languages & Core Technologies: Python, JavaScript, TypeScript, Java, C, C++, Haskell, PHP, SQL (Postgres, MySQL), HTML, CSS, SCSS, JSON

Frameworks & Platforms: React, Next.js, Tailwind CSS, Framer Motion, GSAP, WebGL, Recharts, Node.js, Express, RESTful APIs, Firebase (Auth, Firestore), MongoDB, MongoDB Atlas, AWS
